

## PRODUCT DATA

# Low Temp Rinse

## *Machine Rinse Agent*

**LOW TEMP RINSE** is designed for controlled injection into the final rinse of an automatic dish washing machine. This aids in quick drying as well as prevents spotting, streaking and staining.

**Directions:** For better cleaning always scrape off excess food soil and other particles, before racking dishes. This will help prevent their entry into the wash tank which otherwise would cause foaming and prevent good cleaning. Rinse with moderately warm or hot water.

Meter **LOW TEMP RINSE** generally at 100 ppm for most applications. Temperature should be maintained at 55 °C (130°F) or thereabout to prevent foaming. Do not overuse - proper dilution will provide desired results.

Check with your local health authorities for mandatory sanitizing requirements.

Refer to the Material Safety Data Sheet for safety information.  
**FOR INDUSTRIAL and INSTITUTIONAL USE ONLY.**
